

IPSI 2010 Developing a Trusted Cyber Infrastructure for Canadians

by
Catherine Johnston
President and CEO
ACT Canada

WHY?

- We desire to live in a world that is electronically connected
- We expect adequate security
- We demand convenience
- We want an appropriate level of privacy

Putting Together the Pieces

Governments

Criminals

Citizens

Merchants

**Law
Enforcement**

Regulators

**Critical
Infrastructure**

*Health Care
professionals*

Suppliers

Consumers

Standards Bodies

Financial sector

21 years of connecting members & supporting their goals

Shifts and Fundamental Changes

The Shift

- Security and fraud is changing in Canada as the financial sector raises the bar

The Fundamental Changes

- Blocking the outsiders vs controlling the insiders
- Leveraging security to increase services

The Health of the Land...

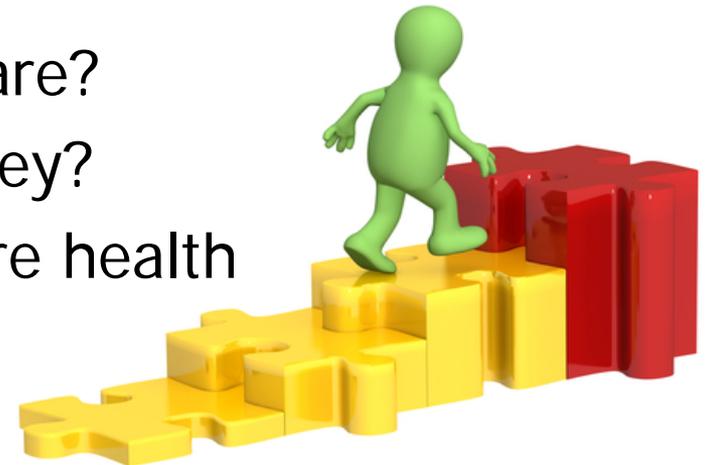

■ Canadians and others

- ❑ Is the person entitled to government paid health care?
- ❑ Is the entitlement document or online certificate authentic?
- ❑ Is the person presenting the document/certificate the person to whom it was issued?
- ❑ Should the person have access to online services or information?
- ❑ What should they be able to do online?

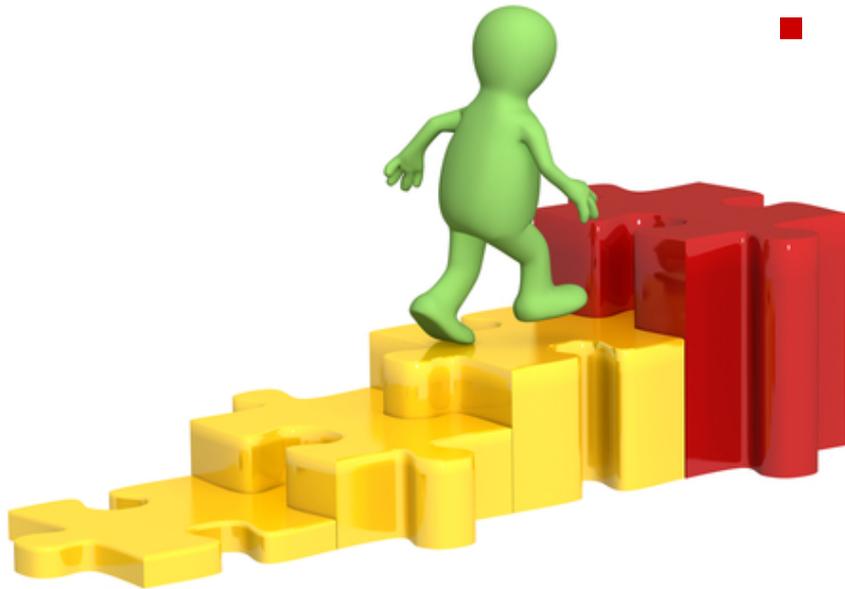

Possible and Positive Outcomes

- ❑ Will Canadians agree to e-health records if they trust the security and privacy provisions?
- ❑ Will that provide Doctors with better patient information?
- ❑ Will that provide better health care?
- ❑ Will that save governments money?
- ❑ Will that provide funding for more health care?

The Health of the Land...

■ Will cyber security...

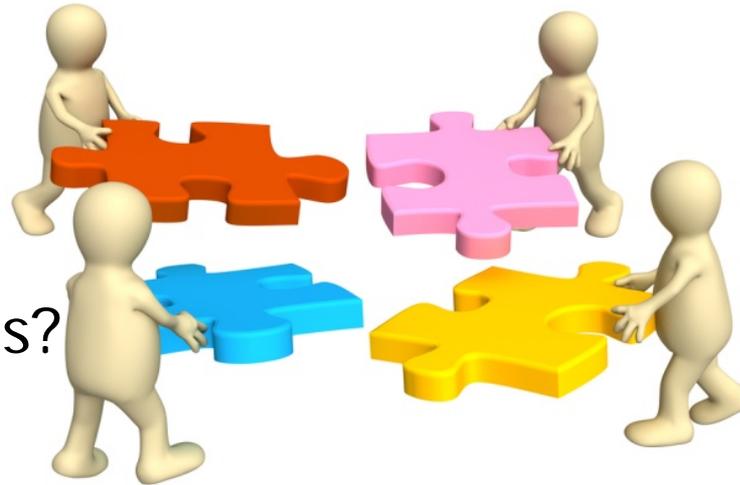

- ❑ Result in new entitlement documents or online certificates?
- ❑ Will that reduce fraudulent use of the healthcare system and budget?
- ❑ Will that fund new services such as remote care?
- ❑ Will that lead to increased e-government usage?
- ❑ Will that save government money?
- ❑ Will that lead to increased services?

Research...

- What are the best practices worldwide?
- Who are the stakeholders?

- Where are the Gaps and Overlaps?

- How do we block, control and leverage to provide ...

- e-connection
- security
- convenience
- privacy

Talking the talk

- Terminology is the largest problem we face in research. The words are the same, but the meaning is not!
- Having all stakeholders represented brings the best results

The ripple does not
bring about just
one change, but
affects many.
